What is a Mapathon?

A Mapathon is where people from all backgrounds work together to add data to maps in areas in need.

Why map?

Mapping with OpenStreetMap is a great way to contribute to international humanitarian aid without leaving your room!

Where do we map?

Anywhere in the world! But we give priority to areas in need of disaster relief. This event will focus on climate change in the Philippines.

What do you need?

All you need is a laptop and internet connection! OpenStreetMap is an online tool, so no software is necessary. OSM is easy to learn, no mapping experience is required!
